

Quick Disconnect

PLATINUM Series

IMPACT™ Introduces the 6 pin Hirose™ style in-line quick disconnect series. Available on all Platinum Series products, the QD feature allows the user to quickly and easily attach and detach his accessory from the radio without detaching the UDC/Connector from the radio.

This feature is particularly attractive when using multi-pin accessory connectors which are screwed down to the radio or when using retention brackets on single and dual pin jacks.

Adapters are available for most radio makes and models. For a full list of available adapters please visit www.impactcomms.com
